Data exchange standard

Commercial model

IATA Travel Pass will be free for passengers to download and use.

Airlines will need to pay a small fee for every flyer who makes use of the service in the course of their travel journey.

Application Overview

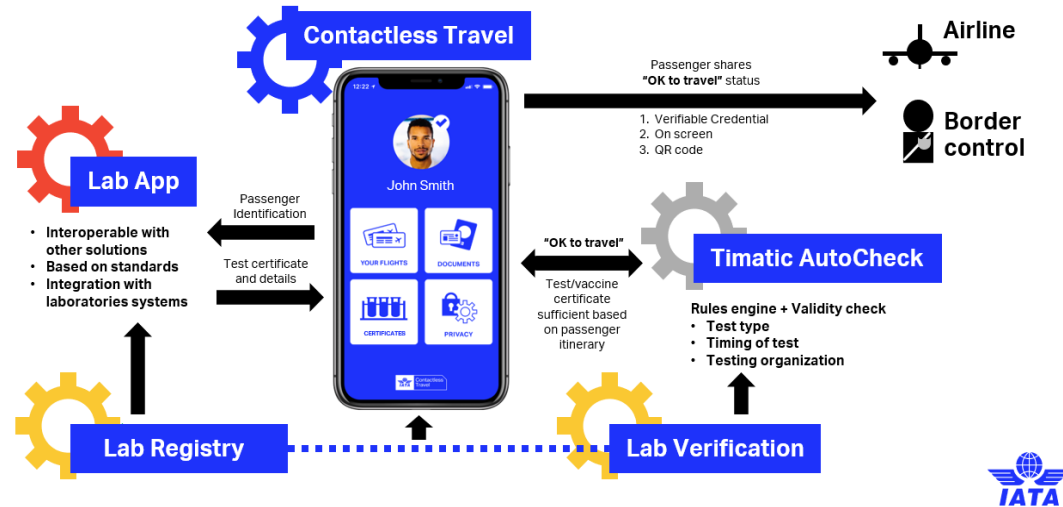

At its core, the **IATA Travel Pass** is an app providing a global and standardized solution to validate and authenticate all country regulations concerning the COVID-19 passenger travel requirements.

The mobile app will produce verifiable records of a traveler's test results, proof of vaccination (as they become available) as well as their digital passport, as required by both the government and airlines.

Conversely, based on **IATA's Timatic platform**, travelers can also take advantage of the app to learn the details of a particular destination's prevailing travel restrictions. Travel Pass incorporates four open-sourced and interoperable modules for swift deliveries of traveler's test results and vaccination certificates.

How does it work?

How the modules combine as an integrated service Overview

Output

QR Code / Travel Status / On-Screen certificate

Workflow / Core steps

1. Download the App and answer travel questionnaire
2. Advises traveler on certified labs
3. Traveler takes test / vaccine
4. App links to LAB app and verifies identity of traveler - automated upload of Lab app test/vaccine certificate.
5. Check with destination requirements (Timatic) and generate OK to Travel status
6. Can produce certificate on screen plus QR-code and 'OK to travel' status

Partners network / Ecosystem

Piloting / Launch Status

IATA and International Airlines Group have been working together in the development of this solution and will undertake a trial to demonstrate that this platform combined with Covid-19 testing can reopen international travel and replace quarantines.

The first cross-border IATA Travel Pass pilot is scheduled for later this year and the launch slated for Q1 2021.

General overview

Reconnect the world safely

- Travel Pass developed in **four independent modules** that can **interact with each other**: global registry of health requirements; global registry of testing / vaccination centers; lab App; contactless Travel App
- Key design elements include:
 - Travelers always control their personal information
 - Global standards recognized by governments to ensure verified identity and test/vaccine information
 - Integration of contactless travel processes to enhance biosafety
- Travel Pass aims to be a **universal solution**, meaning that it can co-exist with existing solutions (i.e. CommonPass)
- Travel Pass is **compliant with GDPR, ICAO, One ID and W3C**

Benefits of IATA Travel Pass?

- Universal**: built to meet passenger, government and airline needs
- Proven**: based on existing IATA solutions
- Modular**: airlines can choose modules supporting their strategy
- Trust Framework**: partner for mutual benefit
- Decentralized technology**: no central passenger database
- Interoperable**: open standards and open networks
- Sustainable**: additional data-sets required for travel can be easily integrated into app
