

# Amadeus B2B Wallet Prepaid

Turn payments into profit

## **Paying your travel suppliers can be time-consuming and costly.**

Manual processes can introduce errors, while hidden costs include credit card surcharges, wire transfer and foreign exchange fees. Bank transfers payments are not always guaranteed and you often have no protection against supplier default.

**Virtual payment cards** are a secure way to pay your travel suppliers instantly and help to reduce the hidden costs of payments. They work like a traditional payment card except that the card details (card number, expiry date, spend limit and security code) are generated each time the card is used. This improves the security of transactions when a physical card is not required, such as online, over the phone or by fax.

## **Choose the card that will give you the best return**

Amadeus B2B Wallet Prepaid gives you a choice of two prepaid virtual payment cards that allow you to earn revenue from your supplier payments or save money by avoiding payment card surcharges for any type of travel content. The **MasterCard prepaid card** earns you a rebate on every purchase made, while the **Visa debit card** helps to minimise or avoid supplier card fees and surcharges.

## **Reduce the complexity of supplier payments**

Both cards can be used to purchase any type of content for any type of supplier: full service airlines, including those using BSP\*; low-cost airlines; hotels; rail travel; car rental; cruise and travel packages. Cards can be issued in a number of different currencies, helping you to reduce foreign exchange fees, and offer competitive exchange rates for those currencies not available.

A unique card number is generated for each payment, which is then communicated to the supplier. The complete process can be made from your preferred front-office solution: Amadeus Selling Platform, Amadeus Selling Platform Connect or via Web Services.

## **Beat fraud and reduce risk**

You have complete control over how and when each virtual card can be used for complete peace of mind. Authorise payments only to be made to travel merchants, restrict card use to a specific timeframe, define the amount available to spend for each card, allow single or multiple use, or limit use to a given office ID and/or selected users.

In addition, merchant guarantees help to protect you against supplier default and you have no financial liability, as Amadeus acts as the cardholder.

## **Expedite reconciliation**

All your booking and payment data is contained in a single report for a streamlined reconciliation process. Each card number uniquely identifies the transaction and up to five additional data fields can be included to customise your reports.

## Key features and benefits of Amadeus B2B Wallet Prepaid

### Generate revenue or avoid surcharges

- \_ Two payment options give you the choice of earning revenue via a rebate or avoiding card surcharges, allowing you to maximise financial returns

### Make payments for any type of travel content

- \_ Purchase any type of content from any type of supplier in multiple currencies

### Decrease costs when paying your suppliers worldwide

- \_ Virtual cards can be issued in euros, US dollars, pounds sterling, Norwegian kroner, Swedish kronor, Danish kroner, Swiss francs, Canadian dollars, Hungarian forints or Polish zlotys, helping to reduce your exposure to foreign exchange fees

### Minimise risk for total peace of mind

- \_ Control how and when each virtual card is used: set the validity, define a maximum spend and limit the number of transactions for which the card can be used for complete security

### Fully integrated in your booking environment

- \_ Save time by paying your suppliers directly from your preferred front-office solution: Amadeus Selling Platform, Amadeus Selling Platform Connect or via Web Services

### Your payments protected in case of supplier default

- \_ Visa and MasterCard offer guarantees that protect you against supplier default if one of your suppliers goes bankrupt

### Streamlined back-office processes

- \_ Each virtual card has a unique number which is stored both in the booking records and the payment invoice for easy reconciliation

**Together, let's shape the future of travel!**
