

# Amadeus SkyWORKS By Optym

## Flight Schedule Development Platform

Amadeus SkyWORKS By Optym provides **fast, easy editing of flight schedule data**, enabling large scale or single day changes, depending on the type of scheduling changes needed. The SkyWORKS planning system provides numerous schedule alternatives to evaluate different business scenarios, and offers a central repository for all schedule-related information.

## Key Features

### Efficient Data Management:

SkyWORKS supports all the required scheduling data to develop flight schedules, and provides users with the capability to create, edit, save, copy, delete, import, export, compare and merge flight schedules all in near real-time.

### Faster Schedule Development:

SkyWORKS provides users with the ability to view and update a flight schedule, evaluate the schedule against operational rules, and generate aircraft routings. Multiple views show schedule data from different perspectives, and all displays can be used to edit schedules.

### Intelligent Decision Automation:

SkyWORKS automatically identifies swap opportunities to fix common scheduling problems including minimum ground times, out of balance problems, gate violations, maintenance requirements, and extra aircraft. SkyWORKS also stores and calculates changes in passenger connections.

## Key Benefits

**Better Flight Schedules:** Integrated platform to view and evaluate flight schedules via multiple graphical displays, used together to give a complete schedule representation, resulting in higher network profitability.

**Increased Efficiency:** Make structured, fast and accurate decisions with multiple users working on same schedule.

**Superior Planning and Flexibility:** Many scheduling what-if alternatives are created and evaluated, so more scenarios can be analysed.
