

CheckMyTrip Premium provides your customers with all the information concerning their trip in one single app. Direct access to online check-in, display of status of booked flights or rail as well as optional synchronization with their calendar make CheckMyTrip Premium the perfect travel assistant. Your logo and personal messages positioned directly in the app extend your individual travel service.

CheckMyTrip Premium

Now for
smartphone, tablet
and web

The perfect travel companion for business and frequent travelers

Premium service for your business and frequent travelers

With CheckMyTrip Premium you offer a special service to your most ambitious customers. Send the complete itinerary to their smartphone – with all travel data for flight, hotel, car and rail. As needed the traveler can add their own activities to this plan, e.g. a car drive to the airport and gets a complete overview of his or her journey. Push notifications in case of flight delay, rail status with schedule in real time or itinerary, as well as check-in links of the most important airlines, integrated export into calendar, features for travel assistants and a lot more provide a comprehensive service to your traveler.

Completely integrated solution

CheckMyTrip Premium is managed directly out of the Amadeus Selling Platform. Similar to Amadeus Fax and Email Plus, you send the itinerary from the Command Page or from Amadeus Bahn. Status messages in the PNR inform you about the status of dispatch and download, as well as the registration process for new users.

You will always be well informed without changing the system or additional administrative effort.

Flexible operation – scalable costs

With CheckMyTrip Premium you offer a comprehensive service without any investments or setup costs. Moreover CheckMyTrip Premium displays your logo and contact details in a special travel agency tab – totally free of charge.

Individual service under your own label

CheckMyTrip Premium also gives you the possibility to provide a predefined text for your customer. Furthermore special RIR elements offer an additional messaging function for personal information regarding the itinerary.

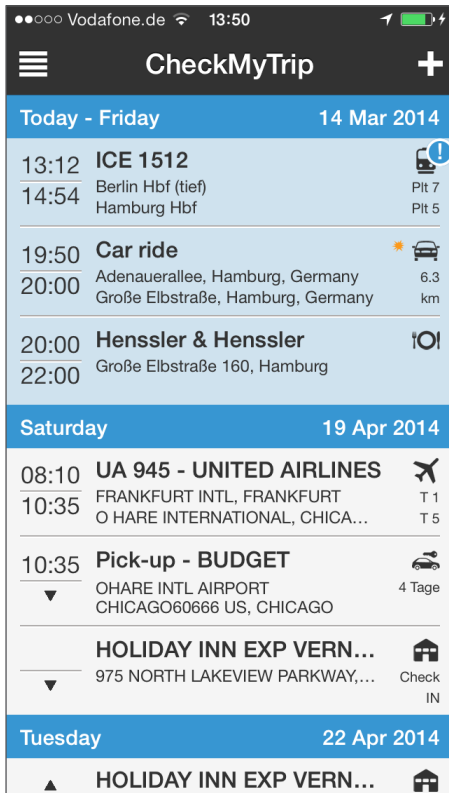

Additionally you can configure your address data via Amadeus Fax and Email Plus Document Center – so that your customer can contact you with one click by e-mail or telephone.

Immediately ready for use

All you need is the e-mail address of your customer for sending the itinerary directly out of the Amadeus Selling Platform. In case your customer uses CheckMyTrip Premium for the first time, the registration process will be started automatically and your customer will get his login data for the app. All further itineraries are sent by push notification.

Professional performance

For major travel agencies or corporations, CheckMyTrip Premium provides further options, e.g. a white label app with your own label and individual design, support for BlackBerry® enterprise server or as add-on CheckMyTrip Premium Locator, a solution for security and communication during the travel.

Itinerary in the calendar view
