

## Amadeus Schedule Analysis

What if you could convert travelers into loyal fans?

Unveil the future of travel planning and get ahead of the game with our Market Insight tool.

### Key features

Amadeus Schedule Analysis is a data and analytics tool part of the Amadeus Agency Insight portfolio. The tool monitors and compares carriers' schedules and capacities at city pair level. It also analyzes and compares carriers' flight segment changes over a specific period, and provides a comprehensive view on flight arrivals and departures at carrier level for a given airport.

### Key benefits

#### Improve operational performance

Analyze the evolution of schedules and seat capacity over time for your top booked airlines operating on your most popular routes. This analysis enables you to negotiate more favorable deals, optimize inventory costs, and make

strategic decisions on which airlines to prioritize in your offerings.

#### Increase customer loyalty

Gain visibility into all flight schedules on your most frequented routes, so you can delight your travelers with the optimal flight choices and potential connecting options.

Enhance traveler experiences by analyzing changes in schedules and seat capacity over time at carrier level on your most popular routes, identifying relevant patterns for smoother journeys.

## How it works

### Data modules

#### Capacity & summary

Provides a detailed view of schedule and seat capacity information for a given route / flight segment over a specific period.

#### Competition intensity

Shows and compares schedule and seat capacity information for all carriers operating on a certain route.

#### Top airline segments

Shows the routes / flight segments, with more seat capacity for a given input criteria (i.e., from France to US) and the percentage of capacity offered by each operating carrier.

#### Comparisons & trends

Illustrates the capacity evolution of all carriers operating on a given route or airport pair over time.

#### Schedule changes

Shows schedule and seat capacity alterations for a given route / flight segment during two specific periods.

#### Hub slots

Provides an analysis of flight arrivals and departures - number of passengers and flights - at carrier level for a given airport.

#### O&D schedule

Shows all the flight options for a given city pair over a specific period.

### Data sources

Amadeus Schedule Analysis processes data from OAG (Official Airline Guide), and Amadeus GDS (Global Distribution System).

### Data consumption

Amadeus Schedule Analysis sources data through both pre-defined BI Dashboards and Data Feed mechanism.

# It's how travel works more profitably.
