

Amadeus Selling Platform Connect

Quarterly product update: Q2 2024

New enhancements. Key highlights. Productivity hacks.

Twice the results in one view with the New Air Shopping Display

Shop, compare, and upsell all air content more efficiently with a display that suits experts and beginners. Enjoy a smoother experience with the same display and flow for EDI, NDC & LCC, plus benefit from a new harmonized booking summary page for diverse content types.

Products Section: Simplified management of all content

With the new Products Section in the booking file, you can manage all contents during the booking and after-sales processes effortlessly with a consistent interface and appearance, similar to the NDC. View itinerary and price details directly from each product.

NDC: Expanding your capabilities

For Vueling, improvements include price per bound in booking flows, fraud data adaptation, and cancel flow. For United Airlines, you can now change allocated seats even after ticket issuance. Additionally, you can now apply retained credit for American Airlines tickets.

NDC: Quality Monitor integration for enhanced interoperability

Perform seamless Quality Monitor rule checks for NDC PNRs using the new triggers. You can now conveniently create NDC rules in the editor flow and execute Quality Monitor NDC rules with the same ease and familiarity you're accustomed to.

Hotels: Boosted productivity with added enhancements

Refine the search using the radius filter in advanced search criteria. Save up to 10 of your favorite hotels for more efficient searching. Book best-rated non-identical multirooms for aggregators and seamlessly enable or disable any aggregator from the panel.
